NOTICE OF WATER MAIN FLUSHING

The Water Utility will be conducting routine water main flushing throughout the Town of Mahone Bay as follows:

**8:00 PM to 6:00 AM - Wednesday OCTOBER 23rd, 2019**

&

**9:00 PM to 6:00 AM - Thursday OCTOBER 24th, 2019**

What to expect:

- Reduced Water Pressure
- Discoloured Water
- Intermittent Service Disruption

What to Do:

- It is recommended that customers without backflow prevention devices close the main shut-off valve and water supply valve to hot water heaters to help avoid the possibility of burning out heating elements or having discoloured water enter the hot water heater.

- To help avoid the possibility of damaging equipment, consider turning off booster pumps during flushing.

- **Check for discoloured water prior to doing laundry or running the dishwasher.** Suspended material causing the discolouration can permanently stain clothes, linens, etc. To check, run a cold water faucet, if discoloured water is present, flush your system by continuing to run a cold water faucet until the water is clear.

The Town of Mahone Bay regrets any inconvenience which may be created during water main flushing procedures. Water main flushing is a semi-annual maintenance procedure used to clean our water mains.

Please direct any questions or comments to the Town Office at: 902 - 624 - 8327
